

海南葫芦娃药业集团股份有限公司
非经营性资金占用及其他关联资金
往来情况的专项审计说明

目 录

非经常性损益专项说明

第 1—2 页

非经常性损益占里及其他关联资金使金挂账清办忘忘城

第 3 页

非经营性资金占用及偿还情况

公司2020年度利润分配方案，包括2020年12月31日的合并及母公司资产负债表，

2020 年度合并及母公司和子公司现金流量表及母公司现金流量表

Figure 1: Schematic representation of the experimental design. The diagram shows a sequence of events: a subject is presented with a stimulus (a word), then a response is generated (a word), and finally a feedback is provided (a word). The response and feedback are shown in boxes, indicating they are part of the experimental manipulation. The stimulus is shown in a box, indicating it is also part of the experimental manipulation.

15. *Chlorophyll a* (Chl *a*) is the primary photosynthetic pigment in most photosynthetic organisms. It is a green pigment that absorbs light energy and converts it into chemical energy. Chl *a* is found in the thylakoid membranes of chloroplasts. It is a central component of the photosynthetic reaction center, where it plays a crucial role in the light-dependent reactions of photosynthesis. Chl *a* is synthesized in the stroma of chloroplasts and is then transported to the thylakoid membranes. It is a primary pigment in the light-harvesting complex, which captures light energy and transfers it to the reaction center. Chl *a* is also involved in the regulation of photosynthesis, as it can be converted into a non-fluorescent form under stress conditions, which helps to dissipate excess energy and protect the photosynthetic apparatus from damage.
